## Computer Software

Victorine, J. R.—**PSI Tides Java Applet - Lunar and Solar Tidal Pressure**, developed to read the Wellington KGS 1-28 CSV pressure/temperature files, to analyze the pressure data and to understand the pressure changes. The computer program removes the solar & lunar tidal pressures from the filtered measured pressure data and plots the data as profile plot in time. The final pressure with the lunar and solar pressures removed are plotted with the barometric pressure times the barometric efficiency factor. The two curves have been shown to line up almost entirely across each weeks measurements. The program shows that you can account for the natural every day influences, lunar & solar pressure and the barometric pressure, and basically all that is left is fluid movement due to the formation. Victorine, J. R.—**Gridding & Mapping Animation Java Applets**, a gridding and mapping module that allows the user to plot brine data for the CO<sub>2</sub> Project Wells Map.

### – CO<sub>2</sub> Brine Data Gridding & Mapping Field Animation

The map area is limited to 14 wells surrounding the CO<sub>2</sub> injection well, Wellington KGS 2-32. A limited set of brine sample measurements were taken on a regular basis to monitor the progression of the CO<sub>2</sub> in the Mississippian formation around the injection well, i.e. PH, Conductivity, Temperature, Alkalinity, Total Dissolved Solids (TDS), etc. The data was saved to the KGS database and each measurement set (sample date) was given a lab group number so the animation program could generate individual images by date for the animation.

### – Fluid Level Gridding & Mapping Animation

The map area is limited to 14 wells surrounding the CO<sub>2</sub> injection well, Wellington KGS 2-32. The fluid level was monitored on a regular basis to monitor the progression of the CO<sub>2</sub> in the Mississippian formation around the injection well, i.e. Oil Cut, Barrels of Oil per Day, Fluid Levels, Bottom Hole Pressure, etc. The data was saved to the KGS database and each measurement set (sample date) was given a fluid group number so the animation program could generate individual images by date for the animation.

## **KGS Web Site Additions**

28 KGS bulletins were added to the web site during 2011 with five older publications from other series.

28 KGS open-file reports were placed online.

Maps were scanned and added to the web site for all of the county bulletins and many of the other older publications placed online.

Around 13,000 water well completion forms were scanned in 2011. 27,000 wireline logs were scanned and added to the web site, and over 3,000 other documents for oil and gas wells were scanned.
