Locality description	Quarry due east of water works on north edge of Herington
----------------------	---

Measured by W. Ives

Date 10/27/54

Remarks

Bed No.

Description

Thickness

1	Limestone - fresh color is a yellowish-gray to yellowish-tan; rock is chalky-appearing on the weathered surface but is actually hard and dense when fresh; bedding planes are even and bed thicknesses vary; rock breaks into blocks and slabs for the most part; contains scattered occurrences of nodular and tubular chert as well as large cauliflowerlike masses of drusy quartz.
