The 2016 water-level data were published on the Web and not in paper form. Both the current year's measurements and historical water-level data are archived and maintained on the KGS website in the WIZARD database at www.kgs.ku.edu/Magellan/WaterLevels/index.html. The township-range-section identifier and the depth to water for each well measured in 2016 are provided in tabular form as part of this report and can be found online under the heading "2016 Reports" at www.kgs.ku.edu/Hydro/Levels/index.html.

2016 Water Level Data Acquisition Statistics

Summary

The field-measurement phase of the 2016 annual cooperative water-level measurement program was successfully completed by both the Kansas Geological Survey (KGS) and the Division of Water Resources (DWR), Kansas Department of Agriculture, prior to March 1, 2016. The annual program is designed to regionally sample the High Plains aquifer in Kansas so trends can be established and evaluated for effective incorporation into water-resource management strategies. Water levels were recorded in 97.2% of the 1,392 network wells in 2016. The KGS measured 559 wells and the three DWR offices (Garden City, Stafford, and Stockton) measured 833 wells. The KGS assumed responsibility for reading wells in northwest Clark County in 2016. Data acquisition by KGS staff was completed in January.

Based on spatial analysis of the 2015 annual network-well distribution, 27 locations were identified that required additional water-level data to permit continuous and uniform sampling of the High Plains aquifer. Wells were then identified in these locations that have sufficient construction and historical information and landowner cooperation to attempt a water-level measurement. Of the 27 wells, 23 were measured and were incorporated into the network for 2017. They will be measured in all future measurement campaigns unless the wells become unreliable or are plugged. Yearly geostatistical studies will define undersampled areas and will be used to select optimum locations for replacement wells to eliminate extraneous holes in the hexagonal network used to assure uniform sampling of the aquifer.

Appendices

The two appendices to this report are summary tables.

Appendix A Contains a summary of information for all wells measured by KGS. This appendix includes county, well legal description (ID), and 2016 depth of water below ground surface (BGS). Quality Assurance measurements (QA) and Provisional wells (PROV) are also identified.

Appendix B Contains a summary of information for all wells measured by DWR. This appendix includes county, well legal description (ID), and 2016 depth of water below ground surface (BGS). Quality Assurance measurements (QA) and Provisional wells (PROV) are also identified.

Both the current year's measurements and historical water-level data are archived and maintained at the KGS in a centralized database (WIZARD) that can be accessed at the KGS website at www.kgs.ku.edu/Magellan/WaterLevels/index.html. The township-range-section identifier and the water level for each well measured are also provided in tabular form as part of this report, which can be found online at www.kgs.ku.edu/Hydro/Levels/index.html under the heading "2016 Reports."
