Describe in detail the manner in which the well is plugged, indicating where the mud fluid was placed and the method or methods used in introducing it into the hole. If cement or other plugs were used, state the character of same depth placed from (bottom), to (top) for each plug set.

Cast-iron bridge plug set at 2800', spotted 2sx cement on top of plug, loaded the casing with water and pressured to 500# and held, perforated from 1500'-1501' with 4 holes, cemented casing with 350sx of 60/40 with 6% gel, circulated 35sx cement to pit. cement fell 100' in casing (per Jim Holland). cut off casing 4' below ground level, filled the casing and annulus with 2 yards of "heat" cement, and welded a steel identification plate on top of the casing strings (w/well name and location).
