Show depth and thickness of all water, oil and gas formations.

Describe in detail the manner in which the well is plugged, indicating where the mud fluid was placed and the method or methods used in introducing it into the hole. If cement or other plugs were used, state the character of same depth placed from (bottom), to (top) for each plug set.

Set wireline cast iron bridge plug at 2350' over perfs. Spotted (2) sacks common cement on top of plug with bailer. Loaded casing and pressured to 350' with no leak. Perforated (4) holes in casing at 576'. Mix & pumped 165 sacks of 60-40 Pozmix and 6% gel then pumped 80 sacks cement over casing capacity. Not able to circulate. Pumped (3) sacks cement on annulus & found it full of cement. Cut wellhead off 6' below surface then backfilled to complete plugging. Witness KCC: Jim Holland
