Reehling B-3
Tecumseh (872-880 ft)

- Washout at shale accounting for high porosity on top of sand
- High GR (~100 API), and overlap of BVW and density porosity
- Expected to be wet

Density log reading high (~50%) at washout across shale see caliper log
Reehling B-3

Washout affect density logs just above the Tecumseh sand
Reehling B-3
Severy (692-702 ft)

• Overlying coal (690-692 ft) possibly - high porosity combines with slightly lower GR
• Sand - overlap between BVW and density porosity
• Expected to be wet
Reehling B-3

- Coal overlying Severy sand
