Dear Mr. Boettcher:

RE: Norton County Municipal Solid Waste Landfill

Assuming that the regulations of the Kansas Department of Health and Environment are carefully followed, the site for the addition of the municipal solid waste landfill to the east of the existing landfill facilities should be satisfactory for placement and operation. This also assumes that there are no known problems with the operation of the existing landfill site that would interfere with or indicate that there could be potential similar problems with the new landfill area.

Sincerely,

Donald Whittemore

Re: Norton County MSWL

Kansas Geological Survey
University of Kansas
1930 Constant Ave., Campus West
Lawrence, Ks 66047

Dear Sir or Madam:

Norton County Kansas is proposing to construct a Municipal Solid Waste Landfill (MSWL) within the limits of the counties existing landfill property. I have enclosed a USGS map showing the approximate location of the proposed MSWL site. The new MSWL site will be directly East of the existing facilities. The proposed area to be used is currently being utilized for agricultural production. The proposed facility will be a trench type landfill approximately twenty feet below existing grade. The County's current method, incineration, for disposing of MSW has failed and a fiscally viable alternative is needed for the community. Should your agency require additional information or wish to make a comment regarding the proposed MSWL, please respond back to our office in writing by July 28, 2003.

Sincerely,

Bruce Boettcher, P.E.
