P.O Box 664
Chanute, KS 66720-0664

Dear Ms. Voorhies,
I have reviewed the proposed project for the city of Scammon, in which a replacement well will be constructed.

Based on the documents attached to your request, it does not appear that there are any potential geologic hazards worth noting that might impact this project. However, as one who has conducted surveys of water wells in the deep wells of southeast Kansas, every effort should be made to include in the design an access tube through which a steel tape could be inserted to measure the depth of water in the well. Air lines are insufficient for this purpose because of clogging and damage from well operation.

The above discussion represents our best assessment based on the information that the Kansas Geological Survey has about this locality and/or proposed project at the time of this writing. Other geologic conditions, not discussed herein, or for which the Kansas Geological Survey has no knowledge, may affect the viability or safe operation of this facility or property. The information provided in this letter is from regional or countywide studies and should not be used as a substitute for detailed site characterization by a licensed geologist or engineer. It is the responsibility of the applicant to provide any required site characterizations.

If you have questions please do not hesitate to contact me at my office (785 – 864-2068).

Sincerely yours,

P. Allen Macfarlane
