Re: Agency review for construction of fire station building in Caney, Kansas

Dear Ms. Erbe,

The Kansas Geological Survey (KGS) has received your request for us to review the above referenced project. The project consists of constructing a new 8,200 square foot pre-engineered, steel building for a fire station located at 3rd and Spring Street in Caney, Kansas.

A review of regional geologic information and project information provided by you indicates that there are no unduly adverse geologic conditions that should affect this project. Site-specific conditions should be considered prior to construction. A completed environmental assessment form is enclosed.

This letter is an assessment based on information about the regional geologic conditions available via the KGS and cannot be used in substitute of a detailed site characterization. Other geologic conditions, not discussed herein, or for which the KGS has no knowledge, may affect the viability of the project. It is the responsibility of the applicant to provide any necessary characterization, geotechnical or environmental testing, or design by a licensed professional geologist or engineer to complete the project.

Sincerely,

David P. Young,
Hydrologist
