Plate 18--A representative assemblage of mollusks from post-Bradyan Wisconsinan deposits in Kansas. All figures enlarged approximately 5 times natural size.

Species represented by figures c, f, g, i, and l are found in Kansas only in extreme northeastern Kansas in Bignell loess near the Missouri River. Those represented by figures a, b, d, e, and h comprise the characteristic sparse fauna found in post-Bradyan deposits in the Great Plains region.

a. *Gastrocopta armifera* (Say)
b. *Hawaiiia minuscula* (Binney)
c. *Vallonia gracilicosta* Reinhardt
d. *Vallonia parvula* Sterki
e. *Helicodiscus parallelus* (Say)
f. *Hendersonia occulta* (Say)
g. *Stenotrema leai aliciae* Pilsbry
h. *Succinea avara* Say
i. *Anguisspira alternata* (Say)
j. *Physa anatina* Lea
k. *Helisoma trivolvis lentum* (Say)
l. *Tridopsis multilineata* (Say)
