This map is a preliminary product and has had less scientific and cartographic review than the Kansas Geological Survey’s final reports. It was created using a combination of the Kansas Department of Agriculture’s (KDA) soil maps and the Kansas Geological Survey’s (KGS) surface geology data. The KDA soil maps, which are based on information from Kansas counties, were created through a cooperative effort between KDA and KGS. The KGS surface geology data, which are based on the KGS Geologic Mapping Program, were created through a cooperative effort between the USGS and KGS.

The soil data were used to identify soil types and their distribution across the study area. The surface geology data were used to identify rock types and their distribution across the study area. These data were then combined to create a detailed map of the study area's geology.

The map is intended to provide a general overview of the geology of the study area and to identify areas of interest for further study. It is not intended to be used for specific engineering or construction purposes.

The map is available for download from the Kansas Geological Survey's website. The data used to create the map are also available for download from the KDA and KGS websites.

The map is provided to the public for educational and informational purposes only. The Kansas Geological Survey does not guarantee the accuracy of the data or the map. The user is responsible for verifying the accuracy of the data and the map.
