PRELIMINARY SURFICIAL GEOLOGY OF THE
LYONS SE QUADRANGLE, RICE COUNTY, KANSAS

by William C. Johnson, Nathan A. Schlagel, and John W. Dunham

2017

EXPLANATION

The following description of surficial conditions includes
field data and aerial reconnaissance data from the Kansas
Department of Agriculture (KDA)/Kansas Geological Survey
(KGS) National Cooperative Geologic Mapping Program
(NCGMP). Field reconnaissance was conducted during the
summer of 2016. The Project was initiated by the Kansas
Department of Agriculture and funded in part by the USDA
National Cooperative Geologic Mapping Program (NCGMP).

This report and interpretation are based on observations made during
field work conducted as part of the Kansas Department of Agriculture
(KDA)/Kansas Geological Survey (KGS) National Cooperative Geologic
Mapping Program (NCGMP). This program is a joint effort of the
Kansas Department of Agriculture (KDA) and the Kansas Geological Survey
(KGS) to conduct geologic mapping at the county scale in Kansas. Field
data and reports have been used to produce this report and interpretation.
