Mud was circulated throughout the wellbore during the previous workover in a failed attempt to drill the well deeper. A 50 sx cement plug was set from 2630' to 2987'. This plug was tagged via tbg. A CIBP was set by wireline at 800' and a 95 sx was used to fill the inside of the 5 1/2" csg. from 800' to surface. The 5 1/2" csg. will be cut off 4' below ground level and a steel cap will be welded onto the 5 1/2" csg.
