Oil and gas companies provided the Survey with geologic samples from 400 oil and gas wells.

Samples from 352 wells were preserved at an average rate of nearly 907 sample feet per hour for a total of 395 processing hours.

76,250 sample envelopes and 1,783 sample boxes were used to preserve and restore well samples.

Samples from thirty-six wells were not geologically significant to the oil or gas operator or the sample collection, so they were discarded.

Staff preserved 380,462 sample feet, roughly 72 miles.

Funded 1,162 hours to restore samples for wells and resolved 14,494 sample preservation issues, including the recovery of missing samples for 96 wells.
