Oil and Gas Production in Kansas During 1968

By Douglas L. Beene

TABLE OF CONTENTS

Page

Introduction..... 3

TABLE I - Oil Production..... 5

TABLE II - Gas Production..... 113

INTRODUCTION

Crude oil production in Kansas during 1968 declined by 4.9 percent from production reported the previous year. Production during 1968 was 94.6 million barrels compared to the 99.2 million barrels reported for 1967. Natural gas production decreased by 3.7 percent during 1968, with 8,579 wells producing 848,380,950 M.C.F. compared to 881,138,736 M.C.F. produced during 1967. The Hall-Gurney field in Barton and Russell counties continued to be the leading annual oil-producing field with a little over 3.1 million barrels being produced during 1968. The El Dorado field, with 271.3 million barrels was still the leading field in cumulative production. Ellis County was the leading oil-producing county.

TREATMENT OF DATA

Detailed production statistics for oil and gas from all producing counties are given in Tables 1 and 2. For the oil-producing counties, current and known cumulative oil production, producing area in acres, name of field, discovery year, producing zone, estimated average thickness of producing zone, estimated average gravity of oil, reported number of producing wells, and number of producing wells plugged during 1968 are given.

Production records for individual fields were not kept for many eastern Kansas counties prior to 1944; therefore, the cumulative production of these fields is unknown, and in previous publications was not given. Cumulative production for these fields has been compiled only since 1944 and is marked with an asterisk in this publication. Where oil or gas fields extend across county lines, each county's production has been computed on the basis of individual leases.

In previous years, compilation of current statistics and information used in the production tables was done manually and transferred to files containing historical information; the final typing of the tables was then done from these files. In the interest of accuracy, efficiency, and timeliness, a decision was made in late 1967 to computerize (where possible) all processes of this report. As a result, all historical data such as producing horizons, date and location of discovery well, and previous year's cumulative production were recompiled, keypunched, *etc.*, to compose a historical file. All current statistics (annual production, number of wells, *etc.*) were keypunched on a lease basis and assigned county and field designations by computer programs and then annual county and field data were tabulated and output by the computer as a current file. Programs were then written to combine the current and historical files and print the two tables.

ACKNOWLEDGMENTS

Facilities of the Computation Center, The University of Kansas, were utilized in compiling and preparing this report. Oil production data were obtained from the *Vance Rowe Reports*, company pipeline reports, and Mr. H. A. Beverlin, Oil Proration Analyst, Oil and Gas Conservation Division, State Corporation Commission of Kansas. *Dwight's Oil and Gas Report* and Mr. S. Joe Lewis, Gas Proration Analyst, Oil and Gas Conservation Division, State Corporation Commission of Kansas, were the sources for natural gas production data.

The author was assisted by Candice Heavin, Nancy Miller, Nancy Porter, Helen Wolfe, and William Hladick, III in compiling, keypunching, and proofreading the data to be processed by the computer and in evaluating the output.

Appreciation is expressed to the Nomenclature Committee of the Kansas Geological Society for supplying data on oil and gas pools discovered during the year and for areal descriptions of existing fields.

TABLE I

Oil Production During 1968

*an asterisk after a cumulative production amount indicates that the amount given includes only production after January 1, 1944.
