**Oil and Gas Fields in Kansas, Listing by Name, Location,
and Cumulative Production through January 1, 1992**

compiled by

Douglas L. Beene

Kansas Geological Survey

Open-file Report 93-20

Introduction

This report provides information relating to oil and gas fields shown on the Kansas Geological Survey map M-34, **Oil and Gas Fields in Kansas, 1993**, by Ross, Lee, and Beene. A variety of listings are provided which may be used to locate or identify oil and gas fields on map M-34. Additional information relating to cumulative production from each field is also provided.

Previous editions of the map have had the names placed on the map in proximity to the field. While assembling the data for this map, the authors realized that the density of small fields in many areas of the map would make reasonable placement of field names extremely difficult, if not impossible. It was also felt that the names might obscure trends which appear on the map.

The lists have two components for finding and/or identifying a field; 1) the field name, as defined by the Nomenclature Committee of the Kansas Geological Society, and 2) the location of the discovery well, when known, or the approximate location of the center of the field when the discovery well location is unknown. Locations are given as section, township, range.

Three of the lists contain cumulative production for the fields. Oil field production is given in barrels (52 gallon), and natural gas production is given in MCF (thousand cubic feet).

The lists are:

1) **Alphabetical Listing of Oil and Gas Fields**

This list is sorted alphabetically on the field names and contains all fields, their location, and their cumulative production. Oil and gas cumulative productions are distinguished with a "G" or an "O" following the production. Fields with both oil and gas production will therefore appear twice in this list. Those oil fields noted with an asterisk, "*", have cumulative production recorded since Jan. 1, 1944. All others are recorded since the date of discovery of the field.

2) **Oil and Gas Fields Listed by Location**

This list is based on the land grid system used in legal description of section locations in Kansas. The list is separated into two major groups, East and West Ranges. Each group is then ordered numerically by township, ranges within townships, and sections within each township and range. No cumulative production information is contained in this file.

3) **Oil Fields with Cumulative Production Greater than 50,000 Barrels**

Oil fields are ranked by their cumulative production in this list. An asterisk, "*", indicates that the cumulative production has only been recorded since Jan. 1, 1944.

4) **Gas fields with Cumulative Production Greater than 200,000 MCF**

Gas fields are ranked by their cumulative production in this list.

Alphabetic Listing of Oil and Gas Fields
