INTRODUCTION

This compilation gives the locations of nearly 6,300 reported, non-fuel, industrial mineral pits and quarries in Kansas. Undoubtedly, locations of many other pits and quarries were never reported. For example, early settlers and military personnel worked exposures or outcrops of various limestones for buildings, foundations, fences, etc. without recording the sources. Because large areas of north-central Kansas were underlain by the Fencepost limestone bed or similar beds in the Greenhorn Limestone, and the stone was often covered by little overburden, large numbers of small quarries existed but were seldom recorded.

The locations in this compilation are from records at the Kansas Geological Survey. These records include pit and quarry listings from many Survey publications; U.S. Geological Survey publications; county road and highway departments; field observations during mapping or other geologic investigations, mostly by Survey personnel; and a large number from industrial mineral producers in Kansas.

The listing is alphabetical by county and then by commodity. The terms under the Material column are listed as they appeared in the literature with S & G being used interchangeably with Sand and Gravel. Locations are by legal description and the center point of each description was used to calculate the respective latitude and longitude. When available, the geologic member or formation is given as well as the operator. Dates are given under the Abandoned column and correspond to the year in which the pit or quarry was first listed as abandoned and not when the operation was actually abandoned. Those locations listed with a 1951 date were read from the 1951 Survey state industrial minerals map. Since the actual hard copy records were never found, and such maps were manually drafted before publication, these locations are suspect with respect to the actual quarter section or even the section.

The author again wishes to acknowledge the large number, mostly unknown, of people who have contributed to this compilation during the past century. These include past members of the former Mineral Resources Section of the Kansas Geological Survey. Shelley Sandberg of the Survey's Public Outreach Program is thanked for her recent additions to this list, and appreciation is also extended to Dana Adkins-Heljeson and Kurt Look for arranging this directory in its final computerized form.
