The 2022 water-level data were published on the Web and not in paper form. Both the current year's measurements and historical water-level data are archived and maintained on the KGS website in the WIZARD database at www.kgs.ku.edu/Magellan/WaterLevels/index.html. The township-range-section identifier and the depth to water for each well measured in 2022 are provided in tabular form as part of this report and can be found online under the heading "2022 Reports" at www.kgs.ku.edu/Hydro/Levels/index.html.

2022 Water-Level Data Acquisition Statistics

Summary

The Kansas Geological Survey (KGS) and the Division of Water Resources (DWR), Kansas Department of Agriculture, successfully completed the field-measurement phase of the 2022 annual cooperative water-level measurement program prior to March 1, 2022. The annual program is designed to regionally sample the High Plains aquifer in Kansas so trends can be established and evaluated for effective incorporation into water-resource management strategies. Water levels were recorded in 87.8% of the 1,418 network wells in 2022. The KGS measured 581 wells and the three DWR offices (Garden City, Stafford, and Stockton) measured 837 wells. Data acquisition by KGS staff was completed in January.

A spatial analysis of the 2020 annual network well distribution identified a number of locations that required additional water-level data to permit continuous and uniform sampling of the High Plains aquifer. Researchers then identified wells in these locations that have sufficient construction and historical information and landowner cooperation to attempt a water-level measurement. Of the five wells designated to replace existing wells or fill gaps in the network, five were measured and have been incorporated into the network for 2023. They will be measured in future measurement campaigns unless the wells become unreliable or are plugged. Yearly geostatistical studies will define undersampled areas and assist in selecting optimum locations for replacement wells to eliminate holes in the hexagonal network used to assure uniform sampling of the aquifer.

| January 2022 Acquisition | KGS | DWR | Total |
|---|------------|------------|--------------|
| Number of network wells in 2022 | 581 | 837 | 1,418 |

Appendices

The two appendices to this report are summary tables.

Appendix A Contains a summary of information for all wells measured by the KGS. This appendix includes county, well legal description (ID), and 2022 depth of water below ground surface (BGS). Quality Assurance measurements (QA), Provisional wells (PROV), No Measurement Taken (NMT), and Unable to Measure (UTM) are also identified.

Appendix B Contains a summary of information for all wells measured by the DWR. This appendix includes county, well legal description (ID), and 2022 depth of water below ground surface (BGS). Provisional wells (PROV), No Measurement Taken (NMT), and Unable to Measure (UTM) are also identified.

Both the current year's measurements and historical water-level data are archived and maintained at the KGS in a centralized database (WIZARD) that can be accessed at the KGS website at www.kgs.ku.edu/Magellan/WaterLevels/index.html. The township-range-section identifier and the water level for each well measured are also provided in tabular form as part of this report, which can be found online at www.kgs.ku.edu/Hydro/Levels/index.html under the heading "2022 Reports."
